

ABSTRACT OF THE DISCLOSURE

A tendon receiving duct having a tubular body with a plurality of corrugations extending radially outwardly therefrom. Each of the corrugations is in spaced relationship to an adjacent corrugation. The tubular body has an interior passageway suitable for receiving single tendon therein. Each of the corrugations opens to the interior passageway. The tubular body has at least a first longitudinal channel extending between adjacent pairs of the corrugations on one side of the tubular body and a second longitudinal channel extending between adjacent pairs of the corrugations on another side of said tubular body.
